

B. RILEY FAIRFAX GLOBAL TRENDS STRATEGY

The Benefits Of Global Tactical Risk Management

The B. Riley Fairfax Global Trends Strategy invests in global Exchange Traded Funds (ETFs). The base line asset allocation is 60% Global Developed Markets, 30% Asia & Global Emerging Markets and 0-10% Gold, Energy & Global Commodities; providing a Globally Diversified 100% equity portfolio. These asset allocations may be adjusted based on 200-Day Moving Averages.

Active Tactical Risk Management: B. Riley Fairfax will move the portfolio to cash, short-term treasury bonds and other defensive investments when B. Riley Fairfax's Long-Term Trend Recognition Technology signals a long-term stock market decline or bear market/recession. This risk management technology has served to protect clients from outsized losses during the bear markets of 2000-2002 and 2008-2009.

DISCLOSURES

B. Riley Wealth Management is an investment adviser and broker-dealer registered with the Securities and Exchange Commission (SEC) and is a member of the Financial Industry Regulatory Authority (FINRA). B. Riley Wealth Management is also registered in the states where it conducts business. Investment performance prior to September 30, 2012 was achieved by Foxhall Capital Management, Inc. and Portfolio Manager, Paul Dietrich. Investment performance prior to August 1, 2020 was achieved by Fairfax Global Markets, LLC. The investment process and those responsible for investment decisions continue at B. Riley through the B. Riley Fairfax investment strategies. For a detailed discussion of B. Riley Wealth Management and its investment advisory fees, see the firm's Form ADV Part 1 and 2A on file with the SEC at www.adviserinfo.sec.gov.

The Global Trends Strategy [CREATION DATE 12/31/1999] has a target equity allocation of 100%, however, the portfolio may move entirely to non-equity funds as a defensive position during major market declines or economic recession.

Prior to May 1, 2006 each of the sub-advised managed accounts are counted as individual accounts and as of May 1, 2006 and later they are treated as one aggregate account. A complete list and description of all firm composites are available upon request. NOTE: During the period of 2000 through 2002 an employee account was used as a test account for this strategy. Actual client accounts were not similarly invested and therefore did not obtain the returns portrayed herein. Minimum portfolio size to open a new account is \$30,000. Effective October 2007, ETF strategy accounts that fall below \$20,000 will be removed from the composite.

The S&P 500 Index is an index of the 500 most widely held U.S. stocks. The MSCI ACWI [All Country World Index] Index consists of 45 country indices comprising 24 developed and 21 emerging market country indices. Additional information on any index is available upon request. The returns of the S&P 500 and MSCI ACWI [All Country World Index] [Total] indices are not intended to imply a comparison but rather are provided as a reference point. Comparing the performance of the Strategy, to the S&P 500 and MSCI ACWI [All Country World Index] [Total] indices may be inappropriate because the indices may be more or less volatile than the Strategy. There is no guarantee that any of the securities held by the Strategy comprise the Indices.

Net-of-fees returns are calculated using actual management fees (bundled fee accounts use maximum allowable fee), that were paid and are presented before custodial fees but after management fees, all trading expenses, and withholding taxes. The maximum management fee is 2.5%. Fees may be subject to negotiation where special circumstances warrant. Tax withholding on ADR dividends and capital gains are taken at the time of the dividend payment. Cumulative returns shown reflect the cumulative performance that would have resulted from an investment of \$100,000 made at the inception of the strategy.

Standard Deviation is applied to the annual rate of return of an investment to measure the investment's volatility. Sharpe Ratio is a ratio to measure risk-adjusted performance. The Sharpe ratio is calculated by subtracting the risk-free rate - such as that of the 10-year U.S. Treasury bond - from the rate of return for a portfolio and dividing the result by the standard deviation of the portfolio returns. Alpha is a measure of performance on a risk-adjusted basis. Alpha takes the volatility (price risk) of a mutual fund and compares its risk-adjusted performance to a benchmark index. The excess return of the fund relative to the return of the benchmark index is a fund's alpha. Beta is a measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole.

As with any investment strategy, there is potential for profit as well as the possibility of loss. This performance report is intended for informational purposes only and should not be construed as a recommendation to purchase or sell any particular securities held in composite accounts. No representation is being made that an account will or is likely to achieve performance similar to the results depicted. This performance information may not be indicative of future results. Market conditions can vary widely over time and can result in a loss of portfolio value. Valuations and returns are computed and stated in U.S. dollars, include the reinvestment of all dividends and individual portfolios are revalued monthly. Additional information regarding policies for calculating and reporting returns is available upon request. PAST PERFORMANCE DOES NOT GUARANTEE FUTURE RESULTS. The information contained in this presentation is from sources we believe to be accurate.
